

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

→ 5 minutes

PROBLEM

How might we detect Parkinson's Disease using Machine Learning?

Brainstorm

Write down any ideas that come to mind that address your problem statement.

† 10 minutes

kiruthikaa

Shouldn't consider the accuracy alone, but consider the feasibility also.

Saranya

the pre-existing

combinations of multiple data sets.

Should look into the research papers available. List down the suitable ML and DL models.

Speak with experienced doctors in the field.

dive into related topics.

Comparing and finding the efficient solutions used previously.

The final prediction must have all the details, the individuals need to know.

cross validation methods, while selecting the methods.

Prioritized Ideas

Considering all the 16 approaches best 3 of them are listed below.

Comparing and finding the efficient solutions used previously.

Should use the old and new data sets combined.

Should consider on multiple algorithms from different sources.

Prioritize

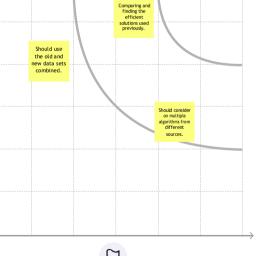

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

(†) 20 minutes

Importance

If each of these tasks could get done without any difficulty or cost. which would have the most positive

Feasibility

Regardless of their importance, which tasks are more feasible than others? (Cost, time, effort, complexity, etc.)
